

NEEDS ASSESSMENT AND CONTEXTUAL INQUIRY

Our end-users are mainly nurses in various ages, mostly female. They have background in nursing school and have experience in home care health, so they are proficient in literacy and numeracy. Our end-users don't have any functional limitations and should have basic smartphone/tablet using skills. Their motivation is to be able to take notes more conveniently by reduce the amount of repetitive notes they should take. Our end-users have close relationship with the patient and their family members.

Our end-users are not constricted in their sensory abilities, motor abilities, and cognitive abilities. They should be able to type and click on the smartphone/tablet. They should also be able to pronounce English words clearly for voice input.

Note: Our second Team-Stakeholder-Agreement will be uploaded once our stakeholder is back from her travels.
